### Timeline and Sequencing

Topics and concepts are presented in a logical coherent progression that includes moving from simple concepts to more complex concepts and ideas to facilitate improved understanding. Lessons are sequenced utilizing building blocks to create a meaningful foundation to apply knowledge for future learning and improved understanding. Overlap of topics and repetition of some questions is purposefully intended to reinforce concepts and promote application across a variety of contexts for enhanced retention. The *Raising PreTeens Right Student Textbook* and the *Raising PreTeens Right Facilitator Guidebook* align to;

- start with foundational concepts,
- progress to expanding on concepts, and
- close with more complex concepts and independent study.

This program is designed to effectively increase student engagement, as students accomplish skills and work towards mastery. This curriculum considers the cognitive load of the student and provides support by breaking down lessons to provide manageable chunks that are interconnected to the larger goals and objectives of this program.
